Fractional Laser

Fractional laser skin resurfacing reveals your beautiful skin from within.

Laser skin resurfacing treats undesirable skin imperfections on your face and body.

Fractional laser skin resurfacing can quickly and easily improve a multitude of skin flaws. It's the skin resurfacing solution that can give you youthful, touchable, and beautiful skin from head to toe.

Laser skin resurfacing can improve the appearance of: Age spots, sun damage, skin tone and texture, wrinkles, surgical scars, acne scars, and stretch marks.

IPL Hair Removal

Intense Pulsed Light - IPL, is light-based hair removal, which permanently reduces unwanted facial and body hair, in fewer treatments and with more comfort than is possible with traditional procedures.

IPL Skin Renewal

Using the principle of selective photothermolysis, IPL treatments target different chromophores in your skin. These optimal wavelengths of light clear vascular and pigmented lesions by targeting the chromophores of hemoglobin (for vascular lesions) and melanin (for pigmented lesions). These damaged lesions are then cleared by the body, removing the appearance of the lesion from the skin.

IPL Skin Renewal can be used to treat: vascular and pigmented lesions associated with spider veins, reticular veins, rosacea, telangiectasias, hemangiomas, sun damage, age spots, dyschromia, melasma, poikiloderma, and angiomas from hands, legs, chest, arms and face.
